

WELCOME TO THE WANGANUT BOTANICAL RESERVE AND JOONJOO TRAIL

Located 5km from the centre of Derby on the junction of the Derby-Broome Road and Worsley Rd.

The 3km walking trail describes on plaques some of the plants and animals of the Wanganut Land System and how they were used by the Nyikina people. The interaction of plants, animals and insects throughout the cycles of the seasons is described.

Over 34 species of plants are identified. A small booklet is available for \$4.95 from the Derby Visitor Centre listing species of animals, butterflies, birds, reptiles and plants that have been recorded in the Wanganut Reserve to date. This includes the Agile Wallaby, *Macropus Agilis*, 50 species of birds, the Olive Python, King Brown snake and Gould's Monitor or Goanna, and over 70 species of plants.

The Joonjoo trail is an easy walk but inclined to be sandy in the Dry Season and a bit boggy in places in the Wet Season. Good walking shoes are recommended. Take insect repellent, sunscreen and water. The quiet walker will be well rewarded with glimpses of the local wildlife. Early morning and evening walks are recommended.
